

HORSE STALLS

Traditional Stalls

Traditional stall frames are made with 2" x 2" 16 gauge square tubing. All vertical bars on fronts and dividers are made with 1" 14 gauge tubing at 3" spacing.

Stall fronts & dividers come in standard 10' and 12' lengths. Dividers are available in two styles: solid or vertical rail.

Stall doors roll on aluminum rollers for smooth, quiet opening and closing. They can be centered within the stall front or offset to one side depending on your needs. Drop down door is recessed into the rolling door. Horse-proof latch is mounted flush with the door.

Side feed doors come standard and give access into the stall for feeding and watering purposes. Feed door frames are made with 1 1/4" x 1 1/4" square frame material and 1" 16 gauge vertical rails.

Stalls can be set up in rows as well as back-to-back using connectors and wall mounts.

Powder coated. Available in black, brown, red, green, or gray.

Dimensions:

10' Stall Front	116 1/2" long x 85" high
